AB The invention relates to the use of

a) a compound or several compounds from the group consisting of
flavonoids

b) of the antioxidants or

c) of the endogenous energy metabolism metabolites or

d) of the endogenous enzymatic antioxidant systems and synthetic
derivatives thereof (mimics) or

e) of the antimicrobial action systems or

f) of the antiviral action systems or

g) active compounds of the known, conventional treatment forms

in each case for the treatment or prophylactic treatment of
hyperreactive skin predisposed to dermatitis or deficient, hypoactive
skin or dermatoses.

 CAS INDEXING IS AVAILABLE FOR THIS PATENT.
 AB This disclosure relates to a derivative of L-ascorbic acid which is
 stable, easily incorporated into cosmetically acceptable vehicles and
 enzymatically bioreversible in the skin to free ascorbic acid and a safe
 alkanol component. The L-ascorbic acid derivative includes cholesterol.
 The L-ascorbic acid derivative is a compound selected from the group
 consisting of 3'-(L-ascorbyl-2-o-phosphoryl)-cholesterol, isomers
 thereof and salts thereof.
 PI US 5951990 19990914 <--
 DETD Other suitable preservatives, besides Distoma EDTA and methylparaben set
 forth above, include alkanols, especially **ethanol** and benzyl
 alcohol, parabens, sorbates, urea derivatives and isothiazolinones.
 DETD . . . procaine hydrochloride, vitamin U or methyl-sulfonium salts of
 methionine and pyrroloquinoline quinone, or effective amounts of
 antifungal agents such as **clotrimazole**, ketoconazole,
 miconazole, naftifine, tolinaftate, amphotericin B, nystatin,
 5-fluorocytosine, griseofulvin, haloprogin, of which tolinaftate,
 haloprogin and miconazole are most preferred. In. . .
 DETD . . . zinc, calcium, magnesium, iron and/or copper ions, such as
 ethylene-diamine-tetra-acetic acid (ethylenedioxy)-diethylene-dinitrilo-
 tetra-acetic acid, salicylaloxime, quinolinol, diaminocyclohexane-tetra-
 acetic acid, diethylene-triaminopenta-acetic acid, dimethylglyoxime,
benzoin oxime, triethylenetetramine, desferrioxamine or mixtures
 thereof.
 DETD Solvent systems that are suitable include THF/methanol, THF/
ethanol, THF/isopropanol, dioxane/methanol, dioxane/
ethanol, dioxane/isopropanol, ether/methanol, ether/
ethanol, ether/isopropanol, ethyl acetate/methanol, ethyl
 acetate/**ethanol**, ethyl acetate/isopropanol, methylene
 chloride/**ethanol**, methylene chloride/methanol, methylene
 chloride/isopropanol, DME/methanol, DME/**ethanol** and
 DME/isopropanol.

CLMN Number of Claims: 21

ECL Exemplary Claim: 1

DRWN No Drawings

LN.CNT 3862

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB Personal treatment compositions including cleansing and/or cosmetic compositions are disclosed, the cleansing compositions, for example, comprising from about 0.001% to about 10%, preferably from about 0.005% to about 6%, enduring perfume comprising at least about 70% of enduring perfume ingredients; from about 0.01% to about 95% surfactant system; and the balance carrier. The enduring perfume provides a lasting

olfactory sensation thus minimizing the need to use large amounts.
Preferred compositions are liquid and comprise water as a carrier.

PI US 5849310 19981215 <--

SUMM . . . disperse the particular copolymer being used, with water, the C.sub.1 -C.sub.6 alcohols, and mixtures thereof being preferred; and water, methanol, **ethanol**, isopropanol, propylene carbonate, and mixtures thereof being more preferred. The carriers can also contain a wide variety of additional materials. . . mixtures thereof. When the hair care composition is a hair spray, tonic, gel, or mousse the preferred solvents include water, **ethanol**, volatile silicone derivatives, and mixtures thereof. The solvents used in such mixtures can be miscible or immiscible with each other.. . .

SUMM . . . of a mousse. Other suitable topical carriers include anhydrous liquid solvents such as oils, alcohols, and silicones (e.g., mineral oil, **ethanol**, isopropanol, dimethicone, cyclomethicone, and the like); aqueous-based single phase liquid solvents (e.g., hydro-alcoholic solvent systems); and thickened versions of these. . . .

SUMM . . . oil-in-water emulsions. When the carrier is a hydro-alcoholic system, the carrier can comprise from about 1% to about 99% of **ethanol**, isopropanol, or mixtures thereof, and from about 1% to about 99% of water. More preferred is a carrier comprising from about 5% to about 60% of **ethanol**, isopropanol, or mixtures thereof, and from about 40% to about 95% of water. Especially preferred is a carrier comprising from about 20% to about 50% of **ethanol**, isopropanol, or mixtures thereof, and from about 50% to about 80% of water. When the carrier is an oil-in-water emulsion,. . . carrier can include any of the common excipient ingredients for preparing these emulsions. In fine fragrances, the carrier is typically **ethanol** at levels of from about 50% to about 85%, whereas in colognes, the carrier level is even higher, e.g., from. . . .

SUMM . . . and trans); antibiotics and antimicrobials such as benzoyl peroxide, octopirox, erythromycin, zinc, tetracyclin, triclosan, azelaic acid and its derivatives, phenoxy **ethanol** and phenoxy propanol, ethylacetate, clindamycin and meclocycline; sebastats such as flavinoids; alpha and beta hydroxy acids; and bile salts such. . . .

SUMM . . . sulfate, paromomycin sulfate, streptomycin sulfate, tobramycin sulfate, miconazole hydrochloride, amanfadine hydrochloride, amanfadine sulfate, triclosan, octopirox, parachlorometa xylenol, nystatin, tolnaftate and **clotrimazole**.

AB This invention provides methods and combination formulations and kits to reduce the toxicity of camptothecin drugs, such as irinotecan (CPT-11). Disclosed are therapeutics and treatment methods employing such drugs in combination with agents that increase conjugative enzyme activity or glucuronosyltransferase activity, and agents that decrease biliary transport protein activity, such as cyclosporine A, the resultant effects of which are to decrease the significant side effects previously associated with treatment using these drugs.

AB The present invention pertains to a low stinging and low burning aerosol

foamable fragrance composition, translucent in its pre-dispensed state, which upon discharging from an aerosol container, forms a fast breaking foam. Furthermore, said composition may contain additional ingredients to promote skin moisturization and conditioning. The composition contains surfactant, a propellant, a fragrance, a thickener, and a cosmetic vehicle wherein the ratio of the surfactant to propellant is from about 1:1 to about 1:10.

AB The present invention related to a drug release controlling material responsive to changes in temperature comprising the polyester gel which is obtained by polymerization of a polyfunctional macromonomer represented by the general formula (I): ##STR1## wherein R^{sup.1} represents a hydrogen atom or an alkyl group having from 1 to 6 carbon atoms, X^{sup.1} represents a hydrogen atom, a halogen atom, a cyano group, an alkyl group having from 1 to 6 carbon atoms or a phenyl group, A represents an aliphatic polyester chain, m is 0 or 1, and p, which may be the same or different in each branched chain, represents an integer of from 0 to 6, optionally with a polyethylene glycol derivative which contains polymerizable group(s) at the end(s). The drug release controlling material has an on-off control function of drug release responsive to changes in temperature depending upon the gel transition of the aliphatic polyester gel.

AB Disclosed is a method for producing an intra-oral dental bandage membrane and/or therapeutic membrane containing therapeutic agent. Actinic light is used to polymerize the membrane composition material to fix the composition in position locked with rigid dental structure such

as teeth. The polymerizable substance is manipulated and shaped in a fluid state and then set, as shaped very rapidly in situ. Also disclosed is a new treatment membrane that in a preferred form is a non-symmetrical oligomer that is a urethane polyacrylate.
